EBS Bills of Material (BOM)

No.	Views	Description
1	BOM Current Structured Bills	This view returns information about indented bills of material. This information is displayed on the Indented Bills of Material window of Oracle Bills of Material. A record is returned for each combination of a top assembly item number, a top assembly organization name, a top assembly revision, a cost type, an assembly item number, a component item number, and a level number for a top assembly item number, top assembly organization name, and cost type.
2	BOM Current Summary	This view returns the summary of all the components at the lowest level of explosion for an assembly revision. A record is returned for a combination of an assembly item, an organization name (if available), an assembly revision, an alternate BOM name, a component item, and a cost type.
