

EBS Process Management Inventory (GMI)

No.	Views	Description
1	GMI Inv Stock Locators	This view returns information about the stock locators established within a particular subinventory. A record is returned for each combination of an organization, an item, and a stock locator.
2	GMI Inv Transactions	This view returns information about inventory transactions. A record is returned for an item, a document number, and a storage area (warehouse, lot, or location).
3	GMI Inv Unallocated Rollup	This view returns rollup information about the net on-hand quantities of items with allocated and unallocated inventories. This information was supplied in the Allocated Summary and Unallocated Summary windows of Process Manufacturing Inventory Management. A record is returned for each combination of a company, an organization, a warehouse, and an item number.
4	GMI Item Catalogs	This view returns information about detailed catalog element values assigned to items. This information was supplied in the Item Catalog Groups window and the associated Details window of Process Manufacturing Inventory Management. A record is returned for each combination of a company, an inventory organization, a process organization, an item number, and an element name.
5	GMI Item Master	This view returns setup information about items. This information was supplied in the Items window of Process Manufacturing Inventory Management. A record is returned for each item.
6	GMI Warehouse Rules	This view returns setup information about

No.	Views	Description
		<p>the reorder rules of an item for a specific warehouse or for all the warehouses. This information was supplied in the Warehouse Rules window of Process Manufacturing Inventory Management. A record is returned for each combination of an item and a warehouse.</p>
7	GMI Warehouse Transfer	<p>This view returns setup information about the material requisition planning suggestions related to the items to be transferred between warehouses for replenishment. This information was supplied in the Warehouse Transfer Rules window of Process Manufacturing Inventory Management. A record is returned for each combination of an item, a source warehouse, a destination warehouse, and the rule preference.</p>
