

Noetix Web Query (NWQ) Migration To Angles Hub With The Excel Add-in

Key Highlights

Efficient Report Migration to Excel via Angles Hub

Enables a smooth migration of Noetix Web Query (NWQ) reports into Angles Hub's architecture, ensuring compatibility with the updated Excel Add-In. Supports essential Excel Add-In reporting functionality and retains core metadata from NWQ reports to ensure continuity and usability.

Comprehensive Metadata Import for Global Views

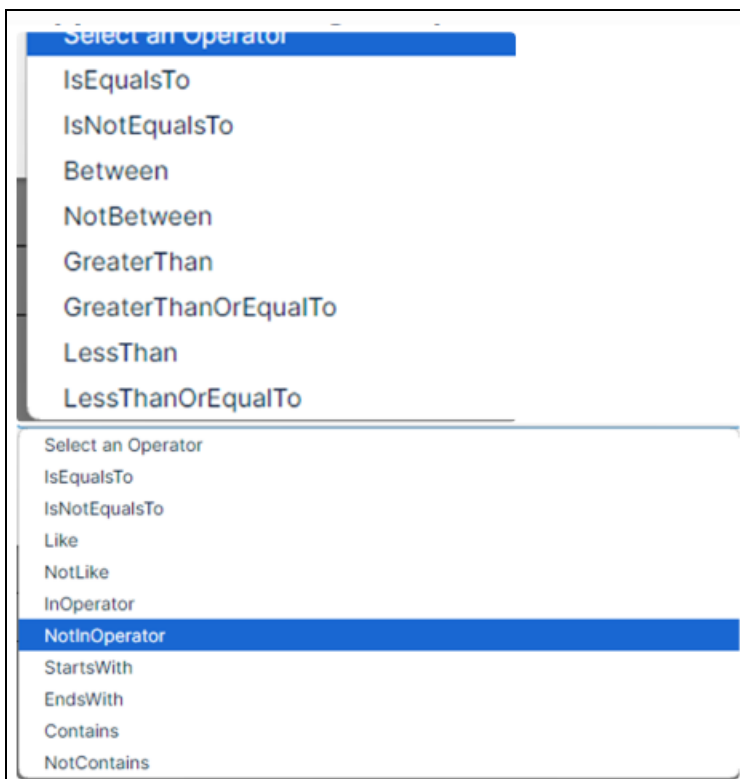

Facilitates the import of all relevant Noetix Web Query (NWQ) metadata, including reports, views, columns, parameters, and filters, thereby reducing migration overhead. Ensures consistency by including both public and private report folders, making it easier to centralize reports within a standard BI framework.

Prepares NWQ Users for Angles Hub Environment

Provides an optimized starting point for NWQ customers transitioning to Angles Hub, with minimal disruption to current workflows. Offers scalability by transitioning to an architecture that can accommodate future reporting and data needs.

Feature Details

- **Range Parameters:** Define specific date ranges within reports to enhance focus and relevance.
- **Complex Parameters:** Utilize intricate parameter configurations for precise data filtering and reporting customization.
- **Support for wide range of operators:** Supports wide range of operators, such as *Less Than*, *Not Between*, and *Between*.

- **Wildcard Search:** Effortlessly locate data entries using flexible wildcard capabilities for improved data retrieval.
- **List of Values (LOV) Functionality:** Present predefined lists of values to enhance report accuracy and streamline data selection.
- **Concurrent Reporting:** Merge multiple reports into a single Excel workbook for enhanced organization and accessibility.
- **Migration Utility Tool:** Simplify the import of global views report definitions from the Query Server to the Hub, enabling report generation in Tableau, PowerBI, or Excel.
- **Performance Enhancements:** Enhance the performance of reports by using snapshot based reporting.
- **Get from Values:** Streamline parameter input in Excel with the "Get from Values" button for enhanced report customization.
- **Workspace Organization:** Organize reports into designated folders for easier navigation and improved management.

- **Multi-Value Selection:** Users can now utilize Multi-Value Selection in parameters, empowering them to choose multiple values within a single parameter field. This functionality simplifies reporting by allowing users to include a broader data set in a single report, without needing multiple filters.
- **Optional Parameters:** Optional Parameters functionality is now available, providing the flexibility to generate reports with or without specific parameters as needed. This enhancement allows for quicker report customization and enables more adaptable reporting scenarios where specific filters may not always be required.
- Core functionality for retrieving, viewing and refreshing migrated NWQ reports in Excel.

Out Of Scope

The following items are not included in this release:

- iqy reports
- Broader architectural and security configurations.
 - ADG replica based reporting
 - Security Manager configuration
