		of an asset, an assignee, a depreciation expense account, and a location.
11	FA Asset Financial Hist	This view returns information on the financial history of the assets. This information is displayed on the Financial Inquiry window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of an asset, a depreciation book, and a transaction. The information returned by the view pertains to the transactions related to the asset's depreciation change, retirement, and reinstatement.
12	FA Asset Financials	This view returns latest financial information on assets in the depreciation books. This information was supplied in the Books window in the Assets window of the Oracle Assets module in the Oracle Financials applications suite. This information is also displayed on the View Financial Information window in the Assets window. A record is returned for each combination of an asset and a depreciation book. The information returned by the view pertains to the most recent financial information for the asset associated with a book.
13	FA Asset History	This view returns historical information on assets. A record is returned for each combination of an asset and a transaction reference number.
14	FA Asset Insurance	This view returns information on insurance policy details of assets. This information was supplied in the Fixed Asset Insurance window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of an asset, a book, a

No.	Views	Description
		policy number, and a policy line number, if a policy line number is available.
15	FA Asset Invoice History	This view returns historical information on the invoice source lines generated for assets. A record is returned for each combination of an asset and an invoice number or for an asset and a project number.
16	FA Asset Invoices	This view returns information on the invoice source lines generated for assets. This information is displayed on the Source Lines window of the Assets Window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of an asset and invoice number or for an asset and a project number.
17	FA Asset Keywords	This view returns information on asset keys. This information was supplied in the Asset Keys window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each asset key.
18	FA Asset Mass Changes	This view returns information on mass changes applied to assets. This information was supplied in the Mass Changes window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each mass transaction number.
19	FA Asset Production Hist	This view returns periodic production information on assets. This information was supplied in the Periodic Production window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of an asset, a book, and a period.
20	FA Asset Scheduled Events	This view returns information on the maintenance event schedules of assets.

No.	Views	Description
		<p>This information was supplied in the Schedule Maintenance Events window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of an event name and a schedule ID.</p>
21	FA Asset Super Group Rule	<p>This view returns information on asset super groups. This information was supplied in the Super Groups window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a super group rule and a book.</p>
22	FA Asset Warranties	<p>This view returns information on warranties. This information was supplied in the Asset Warranties window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each warranty.</p>
23	FA Assets	<p>This view returns information on assets that have corporate books attached to them and the related latest corporate book retirement details. This information was supplied in the Assets window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each asset.</p>
24	FA Bonus Depr Rules	<p>This view returns information on bonus depreciation rules. This information was supplied in the Bonus Depreciation Rules window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a bonus rule and a year range.</p>
25	FA Book Controls	<p>This view returns information on depreciation books. This information was supplied in the Book Controls window of the Oracle Assets module in the Oracle Financials applications suite. A record is</p>

		returned for each book.
26	FA Calendar Periods	This view returns information on depreciation calendars and periods. This information was supplied in the Asset Calendars window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a calendar name, a fiscal year, and a period.
27	FA Capital Budget Actuals	This view returns information on capital budget and actual expenditures. A record is returned for each combination of a book name, an expense account, a category, a period, and a transaction type (budget or actual).
28	FA Categories	This view returns information on categories. This information was supplied in the Asset Categories window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a category and a book.
29	FA CIP Cost Details	This view returns information about construction-in-process (CIP) assets. This information is displayed on the Assets window of Assets. A record is returned for each combination of a book name, an asset number, a begin period name, an end period name, and a depreciation expense account (AcctDepr\$CV\$AccountingKFF).
30	FA Conventions	This view returns information on prorate conventions used to determine the prorate date of an asset. This information was supplied in the Prorate Conventions window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a convention code, a prorate date, and

No.	Views	Description
		an effective date.
31	FA Depr Detail History	This view returns information on depreciation and bonus depreciation of asset assignments. A record is returned for each combination of an asset, a book name, a period name, an assignment and its effective end date.
32	FA Depr Summary History	This view returns information on summarized depreciation history. A record is returned for each combination of an asset, a depreciation book, and a period.
33	FA Depreciation Ceilings	This view returns information on depreciation ceilings. This information was supplied in the Asset Ceilings window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a ceiling name, a year of life, and a ceiling start date.
34	FA Depreciation Details	This view returns information on the latest depreciation and bonus depreciation of asset assignments. This information is displayed on the View Financial Information window in the Assets window of the Oracle Assets module in the Oracle Financials application suite. A record is returned for each combination of an asset, a book name, an assignment, and its effective end date.
35	FA Depreciation Periods	This view returns information on depreciation periods. A record is returned for each combination of a book and a period.
36	FA DepreciationSummary	This view returns information on depreciation summary. This information is displayed on the View Financial Information window of the Oracle Assets module in the Oracle Financials

No.	Views	Description
		applications suite. A record is returned for each combination of an asset and a depreciation book irrespective of the number of active distributions.
37	FA Deprn Dtl Hist SLA GL Je	This view returns information on the historical depreciation transactions. Before the Create Accounting - Assets program is run, a record is returned for each combination of an asset, a book name, and an active assignment. After the program is run, a record is returned for each subledger journal line created for the depreciation transaction.
38	FA Deprn Dtls SLA GL Je	This view returns information on the latest depreciation transactions. Before the Create Accounting - Assets program is run, a record is returned for each combination of an asset, a book name, and an active assignment. After the program is run, a record is returned for each subledger journal line created for the depreciation transaction.
39	FA Category Defaults	This view returns information on default depreciation rules. This information was supplied in the Default Depreciation Rules window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a category, a book, and a default depreciation rule.
40	FA Distribution SetDtls	This view returns information on distribution sets. This information was supplied in the Distribution Sets window of the Oracle Assets module in the Oracle Financials applications suite. A record is returned for each combination of a distribution set, a book, and an assignment distribution.
41	FA GL Invoice Trans Je	This view returns information on invoice
