

EBS Process Manufacturing Product Development (GMD)

No.	Views	Description
1	GMD Formulas	This view returns information about formulas. This information was supplied in the Formula Details window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a formula number, a formula version, a formula line number, an item, and a line type.
2	GMD Qc Customer Samples	This view returns customer-specific sample data and the resultant activities, such as specification of the sample disposition. This information was supplied in the Item Samples window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of an organization code or name, a sample number, an item, and a customer name or number.
3	GMD Qc Customer Tests	This view returns information on quality-control test cases and associated customers. This information was supplied in the Tests window of the Product Development module in the Oracle Process Manufacturing applications suite. A record is returned for

No.	Views	Description
		<p>each combination of a customer and a test code, if a customer is associated with a test case. If a customer is not associated with a test case, a record is returned for each test code.</p>
4	GMD Qc Inventory Samples	<p>This view returns information about samples taken from an inventory and the resultant activities, such as specification of the sample disposition. This information was supplied in the Item Samples window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a sample organization code or name, a sample number, and an item.</p>
5	GMD Qc Monitoring Samples	<p>This view returns information about samples taken from a monitoring source and the resultant activities, such as specification of the sample disposition. This information was supplied in the Monitoring Samples window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a sample organization code or name, sample number, and monitoring resource.</p>
6	GMD Qc Results	<p>This view returns information</p>

No.	Views	Description
		<p>about results of tests performed on samples. This information was supplied in the Results window of the Oracle Process Manufacturing Product Development module. A record is returned for each test performed on a sample.</p>
7	GMD Qc Specifications	<p>This view returns setup information about the quality conformance requirements of items or monitoring samples. This information was supplied in the Specifications window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a specification name, specification version, and test code.</p>
8	GMD Qc Tests	<p>This view returns information on quality control test codes and test values. This information was supplied in the Tests window of the Product Development module in the Oracle Process Manufacturing applications suite. A record is returned for each combination of a test code and a test value.</p>
9	GMD Qc WIP Samples	<p>This view returns information about samples taken from work in process and the resultant activities, such as specification of the sample</p>

		disposition. This information was supplied in the Item Samples window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a sample organization code or name, sample number, formula line type, and batch number.
10	GMD Recipe Customers	This view returns information about recipes and customers associated with the recipes. This information was supplied in the Recipe Details window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a recipe number, recipe version, customer number, and customer shipping location (if available).
11	GMD Recipe Process Loss	This view returns information about recipes and the associated process loss for an organization. This information was supplied in the Recipe Details window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a recipe number, a recipe version, and an organization code.
12	GMD Recipe Validity Rules	This view returns information

No.	Views	Description
		<p>about validity rules specified for recipes. This information was supplied in the Recipe Validity Rule Details window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a recipe number, recipe version, and validity rule associated with the recipe.</p>
13	GMD Recipes	<p>This view returns information about recipes. This information was supplied in the Recipe Details window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a recipe number, recipe version, and step-material association of the recipe version.</p>
14	GMD Routing Resources	<p>This view returns information about routings, associated operations, and resources. This information was supplied in the Process Routing Details window of the Oracle Process Manufacturing Product Development module. A record is returned for each combination of a routing number, a routing version, a routing step number, an operation number, an operation version, an activity code associated with the</p>
